flexera™

Produce software packages in record time

» WHAT YOU GET

Want to create deployment packages quickly and easily? The AdminStudio Package Feed Module provides built-in support for vendor setups. With it, you can download the latest versions and get validated silent command line parameters, customization options and detection criteria for more than 8,600 third-party installers.
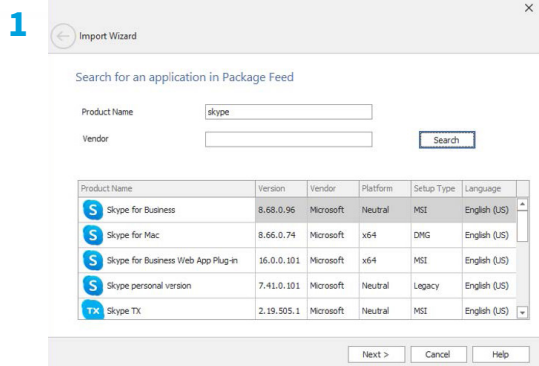

For application managers, each application deployment is its own unique puzzle. The Package Feed Module for AdminStudio—the industry standard for application readiness—is your way to solve these puzzles fast. The Package Feed Module provides a simple wizard for obtaining the latest versions of a vendor setup along with tested silent installation command lines to save you hours of research and testing. Then, for nearly a thousand of the installers that are in Windows Installer (MSI) format, a transform file (MST) is intuitively created to realize a customized installation with ease.
Get customized deployment

More than 100,000 companies have chosen AdminStudio for consistently packaging, testing and publishing new and updated applications. It should be no surprise that AdminStudio is the first to introduce such a powerful new capability. Whether you're working on a Windows 11 migration or updating existing applications (commonly to address a security issue), AdminStudio Package Feed Module is unparalleled in its ability to produce quick and reliable deployment packages.
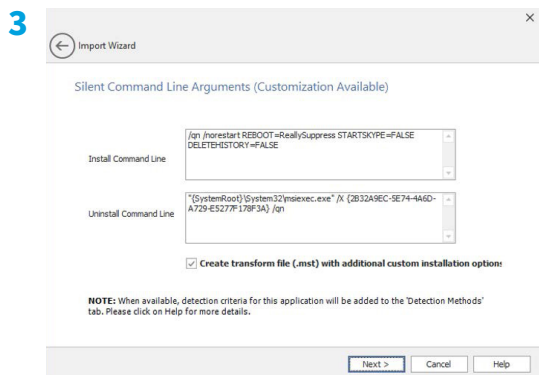

» NOW YOU CAN

- Avoid the need to repackage a majority of your application portfolio

- Select an application and download the latest release directly in AdminStudio

- Access command line information and detection criteria for thousands of vendor setups

- Take advantage of notoriously poorly documented application-specific customization options

- Leverage command line options to automate the conversion to new formats such as MSIX, App-V and more
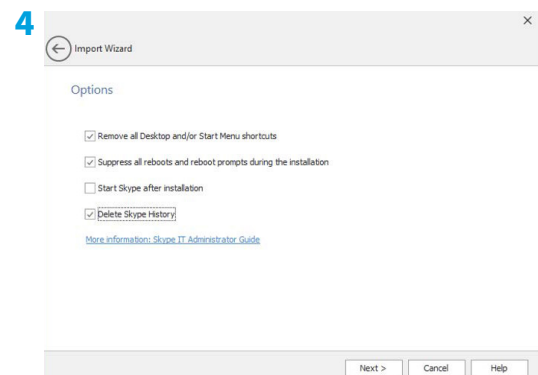

Figure 1: Simplifying and streamlining your patches and vendor setups in AdminStudio

Once you have the vendor setup in AdminStudio, you can:

- Gain insights to mitigate deployment risks with valuable reports
- Wrap the installation as a PowerShell or executable script quickly, leveraging customizable templates
- Publish directly to any of several popular systems management solutions, including ConfigMgr, Intune, VMware Workspace ONE, JamfPro and others

Key product features

Unparalleled application support

Package Feed Module currently supports more than 8,600 different installers, with updates and new additions occurring daily.

Significant time savings

Quickly add new applications to the AdminStudio application catalog with all the details needed for immediate deployment.

Package Feed Module lowers risk and saves time by:

- Providing integrated access to download the latest version of the product
- Identifying the silent installation parameters for the particular version of the product
- Testing if the installation parameters are successful (Flexera lab tested)
- Determining the detection criteria for the application (path, file and version details are provided)

These are unquestionably the most time-consuming aspects of packaging applications for deployment.

» **INSIGHT**

Package Feed Module supports over

8,600

vendor setups

"

[With AdminStudio] our IT team can prepare applications for deployment in **85%** less time than before. The quality and reliability of the software packages are far superior, too."

Jeff Phillips
Application Administrator, Team Fishel

PowerShell or WiseScript wrapping

Vendor setups do not always support the customizations you require from the command line. To avoid repackaging and continue leveraging the vendor setup directly, AdminStudio makes it easy to wrap a setup in a script where such customizations may be effectively included.

Support for App-V and MSIX

Legacy and MSI packages are provided directly from vendors as signed, official installers, which are fully supported. However, AdminStudio can convert these to App-V, MSIX or other virtual formats with ease.

Get a free trial

The free trial of AdminStudio allows you to experience the speed and value of the Package Feed Module for the following products:

- 7-Zip
- Adobe Reader DC
- Google Chrome for Business
- Notepad++
- .Net Framework
- Microsoft Teams for Mac
- UltraEdit

Note: Package Feed Module is an AdminStudio option that can be added for an additional fee.

About Flexera

Flexera helps organizations understand and maximize the value of their technology, saving billions of dollars in wasted spend. Powered by the Flexera Technology Intelligence Platform, our award-winning IT asset management, FinOps and SaaS management solutions provide comprehensive visibility and actionable insights on an organization's entire IT ecosystem. This intelligence enables IT, finance, procurement and cloud teams to address skyrocketing costs, optimize spend, mitigate risk and identify opportunities to create positive business outcomes.

More than 50,000 global organizations rely on Flexera and its Technopedia reference library, the largest repository of technology asset data.
