Position:

Senior infrastructure architect

Edition:

AdminStudio Professional

Application deployment tool:

SCCM

Yanfeng Automotive Interiors (YFAI) is the global leader in automotive interiors. Yanfeng Automotive Interiors is redefining how people relax, work and play inside their vehicle interiors – today and decades from now.

Headquartered in Shanghai, the company has approximately 110 manufacturing plants and technical centers in 20 countries and more than 33,000 employees globally. They design, develop and manufacture automotive interior components for all automakers.

Established in 2015, Yanfeng Automotive Interiors is a joint venture between Yanfeng, one of the largest automotive suppliers in China and Adient, the global leader in automotive seating.

Question & Answer

Before your evaluation/using AdminStudio, what has been the challenges for your team? What has been improvement?

We had some issues with application packaging, the problems we had could be summarized as below:

1. Slow application packaging speed;

2. Low efficiency for application deployment;

3. Require a great deal of time and efforts to support our employees, because of application deployment related issues;

4. We did not have a test center to test application standard.

In particular, after some application packaging experience, we have realized that we need to spend lots of time on how to achieve silent installation and also how to implement the customized configuration of applications. For a long time, we did not have a suitable tool for us to efficiently repackage our applications.

Secondly, we could not use some applications because they do not meet certain standards, the installer provided by the vendor does not support silent installation and customized configuration, these factors have had negative impact on how could we standardize our applications used internally, they also increased our cost to manage these applications.

After your evaluation of AdminStudio, what would be the improvement?

1. The application packaging speed has significantly increased;

2. The application packaging quality has significantly increased;

3. The efficiency for application deployment has been significantly increased;

4. We could reduce the support required for application deployment to our internal employee;

5. We could establish a test centre to test application standard

It is challenging to find an engineer who could write script for application packaging. If we use AdminStudio, then with a basic engineer we could manage the application packaging and deployment requirement for the whole company.

Secondly, AdminStudio could also save lots of compatibility testing efforts in our Windows 10 migration process potentially, and it could provide a compatibility report offering visibility.

What is the most useful feature of AdminStudio?

Application packaging feature;

Compatibility testing report (We are very interested in this feature and will re-evaluate this feature in future. At this stage our priority is to achieve application packaging with efficiency).

Would you recommend AdminStudio to other customers in they have similar issues experienced by yourself?

Absolutely! In fact we also spent time to look for similar software in the market. AdminStudio is very professional.

Why would you choose AdminStudio after you tried/ evaluated other products?

AdminStudio is very professional, during my evaluation process, I have received support and follow up from the vendor.

ABOUT FLEXERA

Flexera is reimagining the way software is bought, sold, managed and secured. We view the software industry as a supply chain, and make the business of buying and supplying software and technology asset data more profitable, secure, and effective.
